**Adding a Product**

Adding a product is a little different in that this plugin takes advantage of variations instead of using simple products.

**Example**:

1. Create a product with the name of your choice, preferably the section name
2. Scroll down and under "Product Type", change from "Simple" to "Variable" in the dropdown
3. In the sidebar menu of the same area, select "Attributes"
4. Enter ONE section attribute and save
5. Enter as many row attributes as you like and check, "Use for Variations"
6. Select "Variations" in the sidebar menu

7. Add each row as a new variation
8. Click on one of the row variations and a slew of options will appear
9. Enter the details for each option and row variation that you want

**Descriptions**

The excerpt in the first popup will change when a row is changed in the dropdown.  It uses descriptions from the information entered in the variations options.  If one doesn't exists, it will use the product excerpt from the main product.

**Images**

There are two galleries

1st Gallery: This gallery uses the "product gallery" in the right sidebar of the product edit screen.  You can add as many images as you like with the size of 300x200

2nd Gallery: Static, meaning these are added manually into the code.  Size is also 300x200
